

The first in-person meeting

In June, we met in Athens to discuss the first tasks. We made plans for the production of the Methodology and Guide for Leveraging SLDs in Entrepreneurship Learning and other results, such as the adaptation of EntreComp materials or an international business idea competition.

Methodology and Guide for Dys Entrepreneurship

We created a guide covering challenges and opportunities of Dys entrepreneurship, strategies for developing entrepreneurial skills, and examples of successful neurodivergent entrepreneurs.

EntrEUth project

This project aims to provide tools that will transform the world of entrepreneurship by making it more inclusive for neurodivergent people with a special focus on dyslexia, dyscalculia, and dyspraxia.

We want to support those with all learning styles in their professional development and business ideas, and open the field of entrepreneurship to a more diverse group of people.
